Informing Change in the Indus Basin
The Indus Basin is a lifeline that Afghanistan, China, India and Pakistan share, but is under ever-increasing pressure. Growing demand on the resource amid climate uncertainty requires effective decision making at all levels supported by strong knowledge and data.

The IBKP provides a one-stop ‘knowledge shop’, allowing decision makers and the wider public access to information on the Basin which will inform and enable more effective responses to multiple development challenges.

Visit [www.indusbasin.org](http://www.indusbasin.org) and help support the IBKP by becoming a Knowledge Partner

**Informing Change in the Indus Basin - ICIB**

The IBKP is one component of Informing Change in the Indus Basin, a DFID-funded programme led by IWMI which supports cooperation and improved decision making in the Indus Basin. The programme has three components: 1) improving the availability and use of existing knowledge; 2) supporting stronger analysis of changes taking place; and 3) creating platforms for dialogue on critical basin issues at different levels.
